Nagpur, Maharashtra

SUMMARY

Computer Engineer with experience building and deploying cloud-based applications using AWS, Docker, Terraform, and GitHub Actions. Developed CI/CD pipelines and real-time monitoring systems, including an uptime monitoring project with automated alerting and infrastructure provisioning. Relocated to India in March 2026, seeking entry-level Cloud, DevOps, or SRE roles.

EDUCATION

Seneca College

Advanced Diploma in Computer Engineering Technology (GPA: 3.9/4.0)

Toronto, Canada

Sep 2021 – Aug 2023

Government Polytechnic

Diploma in Electronics and Telecommunication Engineering (CGPA: 9.26/10)

Nagpur, Maharashtra

Aug 2017 – Aug 2020

PROJECTS

Uptime Arena – Website Uptime Tracker | *Python, Docker, AWS EC2, GitHub Actions, Prometheus, Grafana*

- Built a full-stack website uptime monitoring platform using Flask and React to track real-time availability and response times across multiple endpoints.
- Implemented automated background polling engine to continuously check website availability and trigger instant alerts on downtime events.
- Containerized with Docker and deployed to AWS EC2 via GitHub Actions CI/CD pipeline, integrating Prometheus and Grafana for live metrics and observability.

CloudForge – Cloud Infrastructure Provisioning Tool | *Python, Terraform, Docker, AWS EC2, GitHub Actions*

- Built a self-service platform to provision and manage AWS EC2 infrastructure on demand, eliminating manual cloud setup through full API-driven automation.
- Reduced infrastructure setup time to under 3 minutes by automating instance creation, Nginx configuration, and Docker deployment via GitHub Actions CI/CD pipeline.
- Integrated real-time monitoring and alerting for CPU, memory, and instance health using Prometheus and Grafana dashboards.

EXPERIENCE

Technical Support Representative

Gatestone & Co.

Mar 2025 – Jul 2025

Calgary, Canada (Remote)

- Investigated and resolved application incidents by analyzing logs and system behavior to identify root causes, ensuring SLA compliance.
- Monitored system dashboards and alerts to detect recurring incidents, escalating with documented findings to reduce resolution time.
- Built a Bash automation script that reduced application setup time by 80%, eliminating repetitive manual steps for the team.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, CloudWatch), Terraform, Docker, Kubernetes, Nginx, Linux (Ubuntu)

DevOps & Automation: Python, Bash, Git, GitHub Actions (CI/CD), Prometheus, Grafana, FastAPI, Flask

Databases: MySQL

Certifications: Microsoft Azure Fundamentals (AZ-900)
